LakeLife

BUSINESS PLAN

Build local. Earn trust. Grow carefully.

A focused plan for parks, renters and lake-home care.

INTERNAL / OWNER & TEAM

Audited 17 October 2026

LakeLife.ai

01 / THE BUSINESS

A clearer record.
A local service network.

LakeLife coordinates property work and the records around it. Start with park owners near Big Long, Pretty and Big Turkey Lakes, then serve the households and lake homeowners within a workable local crew route.

Park owners	Scheduled bills by lot, shared cost records, reported issues and crew work in one place. Guided setup is the first sale.
Renters	Understand the bill, see recorded payments and receipts, and follow reported issues. Optional household services remain separate from rent.
Homeowners	Coordinate seasonal care, piers and lifts, boat care, lawn care and housekeeping. Review one service total and see completion photos.

The first offer

“Let’s walk through one billing period and one property task at your park.” Show the owner their next useful step, then agree on a small, supported start.

Planning horizon: the first 90 days build a repeatable local pilot; the 12-month model tests whether recurring park fees and completed service work can support the operation. This is a founder planning document, not a statement of traction.

02 / FOCUS AND POSITIONING

Win the first useful job.

Lead with a problem the owner can point to today: a payment that needs confirming, a shared bill that needs explaining, or property work that needs a completion record.

Initial park fit

- An owner or manager can make the buying decision.
- Recurring lots or seasonal residents create a repeated billing and work routine.
- The owner will reconcile opening balances and support resident onboarding.
- The location fits the founding-lake service area and available crews.

Initial household fit

- A lake homeowner has a defined service need.
- A renter at a participating park wants optional care.
- The property details are sufficient to quote the work.
- The service can be delivered safely within a confirmed route and season.

> **Scope boundary:** avoid leading with overnight campground reservations, full accounting replacement or a new tenant-management system. Validate those needs in discovery before proposing a fit.

Working positioning: **local property coordination with clear records and visible work.** Broad property software is a real alternative. LakeLife must earn the sale through a useful local workflow and responsive setup, rather than claiming to be the only option.

Competitive context: Rent Manager manufactured housing; Buildium pricing and features; Campspot pricing and features. Official pages reviewed 17 October 2026; not hands-on product tests.

03 / OFFER AND READINESS

Sell what can be shown.

OFFER	EVIDENCE IN THE CURRENT PROJECT	BEFORE A CUSTOMER RELIES ON IT
Park records	Bills by lot; shared costs; offline payment reporting and owner confirmation.	Reconcile lot data and balances; run a sample billing period with the owner.
Resident access	Own-lot bills, receipts, issue status and optional care.	Verify the correct household is linked; provide the office-issued claim instructions.
Crew work	Booking, completion-photo requirements and insured-crew routing rules.	Confirm crew, coverage, current insurance and the service-specific photo requirements.
Online rent	ACH/card capability checks and owner-account readiness exist in code.	Connect and verify the actual processor and park account; test settlement and failure handling.
Card service payments	Hosted tokenization contract; current server adapter is a mock.	Verify a real payment adapter, disclosures, charges, refunds and payout handling.

The repository shows intended and implemented workflows. It does not establish that every feature is active in the deployed environment. Use a guided demonstration and an operating checklist for each participating park.

> **Launch promise:** offer a walkthrough and an agreed onboarding scope. Do not advertise universal autopay, instant setup, a free trial or guaranteed savings without an approved and tested offer.

Internal evidence: src/app/for-parks/page.tsx; src/components/RenterHome.tsx; src/app/parks/rent-capability.ts; src/lib/payments-server.ts; src/lib/charge-gate.ts. Reviewed 17 October 2026. No live payment transaction was tested for this plan.

04 / HOW THE BUSINESS EARNS

Two revenue streams. One clear customer total.

Park software fees and service coordination fees are separate. Resident rent belongs to the park owner and is excluded from LakeLife income in this model.

Park software: $8 per eligible lot per month remains an illustrative input, not a universal customer offer. Confirm the current setting, lot eligibility, agreement and billing start. The code's safe fallback is $0.

Service pricing: crew-priced work uses the crew quote and configurable customer and crew fees. Menu-priced work and negotiated park rates retain their existing rules.

ILLUSTRATIVE CREW-PRICED JOB	AMOUNT	BASIS
Crew quote	$300.00	Illustrative quote
Customer total	$336.00	$300 × 1.12
Crew payout	$264.00	$300 × 0.88
LakeLife platform share	$72.00	Customer total less crew payout
LakeLife-paid operating costs	$0.00	Owner-confirmed model
Modeled surplus per job	$72.00	Before tax; no added cost reserves

> Cost basis corrected 18 October 2026: the owner specifies no LakeLife-paid operating costs. No founder salary, overhead, setup allowance, processing reserve or rework reserve is deducted. Crew payouts remain separate from LakeLife income.

The 12% customer fee and 12% crew fee are illustrative, not approved rates. Use actual settings frozen onto each job. This model does not restore a universal 30% margin or change platform pricing.

Pricing evidence: src/lib/platform-fee.ts; src/lib/settings.ts; src/app/book/actions.ts; src/lib/park-platform-fee.ts; migration 0174; decision ad26455. Cost basis: owner instruction, 18 October 2026. Live collection and current commercial rates were not verified.

05 / OPERATING DESIGN

A small, accountable loop.

STAGE	OWNER	WORKING RULE
Qualify & scope	Founder / sales	Confirm park fit, service location, decision-maker and the first workflow.
Set up & reconcile	Operations + park office	Check lots, charge rules and starting balances together before inviting residents.
Book & assign	Operations	Use verified household details, available crew capacity and lake-specific seasonal dates.
Perform & prove	Assigned crew	Complete the agreed scope and required photos; access information is limited to the assigned job day.
Review & resolve	Operations + customer	Obtain homeowner approval before profile corrections change pricing; resolve missing work before completion.
Reconcile & learn	Founder + bookkeeping	Match money records to actual transactions, review exceptions and record the next operating improvement.

Capacity before promotion

Keep a weekly view of open requests, crew availability, drive time, weather limits and unresolved work. Stop promoting a service whose backlog cannot be served.

Support that can be kept

Name the real support contact and operating hours during setup. Track response time in the pilot before publishing a service-level promise.

> **Payment gate:** a bill or an invoice record is not a collected payment. Confirm the actual settlement, refund and payout process before modeling collected cash as available.

06 / STEADY-STATE SCENARIOS

Income grows with parks and completed work.

Illustrative steady-state scenarios retain the prior volumes, $8 eligible-lot fee, and 12% customer and crew fees. The corrected base case includes no LakeLife-paid operating costs or added reserves.

MONTHLY AT STEADY STATE	LEAN	BASE	LARGER ROUTE
Parks × eligible lots	3 × 25	6 × 30	10 × 40
Park fees at assumed $8 / lot	$600	$1,440	$3,200
Active households / year	60	120	240
Jobs / household / year	4	5	6
Average crew quote	$250	$300	$350
Average customer total	$280	$336	$392
Monthly customer service spend	$5,600	$16,800	$47,040
LakeLife service share	$1,200	$3,600	$10,080
LakeLife income incl. park fees	$1,800	$5,040	$13,280
LakeLife-paid operating costs	$0	$0	$0
Monthly pre-tax surplus	$1,800	$5,040	$13,280

Monthly service spend is annual job volume divided by 12; actual activity may be seasonal. Crew payouts are deducted before calculating LakeLife's service share. Resident rent is excluded.

> Base scenario: $1,440 in park fees plus $3,600 in service share produces $5,040 per month before tax. With $0 modeled operating costs, there is no fixed-cost break-even hurdle in this scenario.

Owner-confirmed cost basis, 18 October 2026. Volumes and fee rates remain illustrative. These are planning scenarios, not actual sales, guaranteed earnings or collected cash. Taxes and owner distributions are outside this projection.

07 / FIRST-YEAR PROJECTION

A positive first-year model.

Monthly averages within each quarter, repeated for three months. The existing volume assumptions are unchanged: $300 crew quote, $336 customer bill, $264 crew payout, $72 LakeLife service share and $8 per eligible lot.

AVERAGE MONTH	Q1	Q2	Q3	Q4
Eligible billed lots	30	60	120	180
Completed household jobs	8	20	35	50
Customer service spend	$2,688	$6,720	$11,760	$16,800
Park fees	$240	$480	$960	$1,440
LakeLife service share	$576	$1,440	$2,520	$3,600
LakeLife-paid operating costs	$0	$0	$0	$0
Monthly pre-tax surplus	$816	$1,920	$3,480	$5,040
Quarter pre-tax surplus	$2,448	$5,760	$10,440	$15,120

Year one: $113,904 in customer service spend less $89,496 in crew payouts yields $24,408 in LakeLife service share. Add $9,360 in park fees for $33,768 in LakeLife income and pre-tax surplus at $0 modeled operating costs.

Cumulative surplus: Q1 $2,448; Q2 $8,208; Q3 $18,648; Q4 $33,768. No setup allowance or funding cushion is deducted or requested by this model.

> The previous shortfall came from unsupported expense assumptions and has been removed. This corrected scenario shows a positive result in every quarter. Cash availability follows actual collections and crew obligations.

Owner-confirmed zero-cost planning basis, 18 October 2026. Sales volumes and rates are illustrative; income is not a receipt or earnings guarantee. Taxes and owner distributions are outside this model. See business-model.csv for the complete calculation.

08 / ACQUISITION AND MILESTONES

First prove the workflow. Then repeat it.

WHEN	ACTION	PROPOSED LEARNING TARGET
Days 1-14	Verify demo, payment wording and service capacity. Build a verified owner prospect list.	10 qualified local owner conversations and 4 booked walkthroughs.
Days 15-45	Walk through a real billing cycle; agree on a limited supported pilot.	2 pilot agreements; each has a named office contact and reconciled starting records.
Days 46-75	Observe resident access and completed work; fix recurring confusion.	At least 1 park completes a reviewed billing cycle; record support time and issue resolution.
Days 76-90	Ask for continuation and, with permission, a customer introduction.	2 parks choose a next step; documented reasons from every decline.

These are proposed targets, not existing traction. A park is **activated** only when its opening records are approved, the office can complete the chosen workflow and at least one invited household can access its own record. “Paid” and “collected” remain separate statuses.

Channels to start

Founder outreach, permission-based association introductions, office handouts and local Facebook/Instagram education. Use paid promotion only after the inquiry route and follow-up are working.

Reasons to pause

Unreconciled billing, failed account access, insufficient crew capacity, unclear pricing or payment uncertainty. Keep discovery conversations open while fixing the specific issue.

Suggested channel evidence: Big Long Lake Association membership and community channels. No partnership or endorsement is implied. See the Marketing Rollout for the weekly execution plan.

09 / MANAGEMENT AND DECISIONS

Keep the plan honest.

MEASURE WEEKLY	DEFINITION / DECISION IT SUPPORTS
Qualified inquiry to walkthrough	Owner has a relevant property, a decision role and a specific workflow need. Track why a qualified inquiry does not book.
Walkthrough to activation	Activated parks ÷ completed walkthroughs. Track setup hours and days to first useful workflow.
Resident access	Households that successfully view their own record ÷ invited households. Keep assisted access available.
Service reliability	Completed jobs with required photos ÷ completed jobs; track cancellations, rework and unresolved exceptions separately.
Contribution and cash	Collected park fees plus LakeLife service share, with $0 operating costs in the current model. Track crew obligations and refunds separately.
Retention and fit	Parks choosing continuation; households booking again; reasons for stopping. Do not infer satisfaction from silence.

Founder decisions before broad promotion

- Confirm the park's final fee, included support, billing start and cancellation terms in writing.
- Paid marketing options in the rollout are optional, not committed costs. The current financial base case allocates $0 to paid marketing; add a budget only if the owner chooses one.
- Confirm the real support contact, operating hours, crew capacity and live payment capabilities.
- Set a minimum acceptable contribution and a maximum setup/support workload per park.

Internal source register: AGENTS.md; lakelife.html; lakelife-beta-launch-plan.md; src/app/for-parks/page.tsx; src/components/RenterHome.tsx; src/app/parks/rent-capability.ts; src/lib/park-platform-fee.ts; src/lib/payments-server.ts; src/lib/charge-gate.ts. Current code takes precedence over older design proposals. No customer interviews, new sales or live payment tests were performed for this plan. Keep this document internal because it includes pricing economics. Financial model corrected 18 October 2026 to the owner's zero-operating-cost instruction.
