LakeLife

BUSINESS PLAN

Build local. Earn trust. Grow carefully.

A focused plan for parks, renters and lake-home care.

INTERNAL / OWNER & TEAM

Prepared 17 October 2026

LakeLife.ai

01 / THE BUSINESS

A clearer record.
A local service network.

LakeLife coordinates property work and the records around it. Start with park owners near Big Long, Pretty and Big Turkey Lakes, then serve the households and lake homeowners within a workable local crew route.

Park owners	Scheduled bills by lot, shared cost records, reported issues and crew work in one place. Guided setup is the first sale.
Renters	Understand the bill, see recorded payments and receipts, and follow reported issues. Optional household services remain separate from rent.
Homeowners	Coordinate seasonal care, piers and lifts, boat care, lawn care and housekeeping. Review one service total and see completion photos.

The first offer

“Let’s walk through one billing period and one property task at your park.” Show the owner their next useful step, then agree on a small, supported start.

Planning horizon: the first 90 days build a repeatable local pilot; the 12-month model tests whether recurring park fees and completed service work can support the operation. This is a founder planning document, not a statement of traction.

02 / FOCUS AND POSITIONING

Win the first useful job.

Lead with a problem the owner can point to today: a payment that needs confirming, a shared bill that needs explaining, or property work that needs a completion record.

Initial park fit

- An owner or manager can make the buying decision.
- Recurring lots or seasonal residents create a repeated billing and work routine.
- The owner will reconcile opening balances and support resident onboarding.
- The location fits the founding-lake service area and available crews.

Initial household fit

- A lake homeowner has a defined service need.
- A renter at a participating park wants optional care.
- The property details are sufficient to quote the work.
- The service can be delivered safely within a confirmed route and season.

> **Scope boundary:** avoid leading with overnight campground reservations, full accounting replacement or a new tenant-management system. Validate those needs in discovery before proposing a fit.

Working positioning: **local property coordination with clear records and visible work.** Broad property software is a real alternative. LakeLife must earn the sale through a useful local workflow and responsive setup, rather than claiming to be the only option.

Competitive context: Rent Manager manufactured housing; Buildium pricing and features; Campspot pricing and features. Official pages reviewed 17 October 2026; not hands-on product tests.

03 / OFFER AND READINESS

Sell what can be shown.

OFFER	EVIDENCE IN THE CURRENT PROJECT	BEFORE A CUSTOMER RELIES ON IT
Park records	Bills by lot; shared costs; offline payment reporting and owner confirmation.	Reconcile lot data and balances; run a sample billing period with the owner.
Resident access	Own-lot bills, receipts, issue status and optional care.	Verify the correct household is linked; provide the office-issued claim instructions.
Crew work	Booking, completion-photo requirements and insured-crew routing rules.	Confirm crew, coverage, current insurance and the service-specific photo requirements.
Online rent	ACH/card capability checks and owner-account readiness exist in code.	Connect and verify the actual processor and park account; test settlement and failure handling.
Card service payments	Hosted tokenization contract; current server adapter is a mock.	Verify a real payment adapter, disclosures, charges, refunds and payout handling.

The repository shows intended and implemented workflows. It does not establish that every feature is active in the deployed environment. Use a guided demonstration and an operating checklist for each participating park.

> **Launch promise:** offer a walkthrough and an agreed onboarding scope. Do not advertise universal autopay, instant setup, a free trial or guaranteed savings without an approved and tested offer.

Internal evidence: src/app/for-parks/page.tsx; src/components/RenterHome.tsx; src/app/parks/rent-capability.ts; src/lib/payments-server.ts; src/lib/charge-gate.ts. Reviewed 17 October 2026. No live payment transaction was tested for this plan.

04 / HOW THE BUSINESS EARNS

Two revenue streams. One clear customer total.

Park software

Current internal planning baseline: $8 per eligible lot per month. Operations can configure the rate, and a park-specific agreement can override it. Confirm the final rate in the owner proposal.

Household services

Target service spread is 30% of the customer's all-in price. Crew cost, processing, rework and support determine actual contribution. Customer and crew materials must not expose internal economics.

Park rent

Rent belongs to the park owner. Do not count resident rent or shared-cost collections as LakeLife revenue in this management model.

ILLUSTRATIVE $300 SERVICE	AMOUNT	MEANING
Customer total	$300	One visible price for the agreed work.
Crew cost at target	$210	70% of customer total.
Gross service spread	$90	30% of customer total, before other costs.
Processing reserve	$9	Assumption: 3% of customer total.
Rework reserve	$6	Assumption: 2% of customer total.
Service contribution	$75	25%, before fixed overhead and founder pay.

Margin is not markup. At a 30% target margin, price = crew cost ÷ 0.70. A $210 crew cost requires a $300 customer total; multiplying $210 by 1.30 would miss the target.

Internal basis: AGENTS.md and src/lib/park-platform-fee.ts. Eligible software lots are live, in service, not park-owned homes, and not slip/storage inventory; occupancy alone does not decide eligibility. $8 supersedes the older $1-$3 concept in park-module-design.md. All reserves here are planning assumptions.

05 / OPERATING DESIGN

A small, accountable loop.

STAGE	OWNER	WORKING RULE
Qualify & scope	Founder / sales	Confirm park fit, service location, decision-maker and the first workflow.
Set up & reconcile	Operations + park office	Check lots, charge rules and starting balances together before inviting residents.
Book & assign	Operations	Use verified household details, available crew capacity and lake-specific seasonal dates.
Perform & prove	Assigned crew	Complete the agreed scope and required photos; access information is limited to the assigned job day.
Review & resolve	Operations + customer	Obtain homeowner approval before profile corrections change pricing; resolve missing work before completion.
Reconcile & learn	Founder + bookkeeping	Match money records to actual transactions, review exceptions and record the next operating improvement.

Capacity before promotion

Keep a weekly view of open requests, crew availability, drive time, weather limits and unresolved work. Stop promoting a service whose backlog cannot be served.

Support that can be kept

Name the real support contact and operating hours during setup. Track response time in the pilot before publishing a service-level promise.

> **Payment gate:** a bill or an invoice record is not a collected payment. Confirm the actual settlement, refund and payout process before modeling collected cash as available.

06 / STEADY-STATE SCENARIOS

Volume has to support the service promise.

These are operating scenarios, not market-size estimates or sales forecasts. All service volume is incremental household work; rent and shared-cost collections are excluded.

MONTHLY, AT STEADY STATE	LEAN	BASE	LARGER ROUTE
Participating parks × eligible lots	3 × 25	6 × 30	10 × 40
Eligible lots	75	180	400
Park fees at $8 / lot	$600	$1,440	$3,200
Annual active households	60	120	240
Jobs / household / year	4	5	6
Average service total	$250	$300	$350
Monthly service GMV[1]	$5,000	$15,000	$42,000
Service contribution at 25%	$1,250	$3,750	$10,500
Total contribution[2]	$1,850	$5,190	$13,700
Fixed operating cost + founder pay	$4,200	$4,200	$4,200
Monthly remainder	-$2,350	$990	$9,500

[1] GMV is total customer service spend, averaged across the year; seasonal cash will be uneven. [2] Park fees plus service contribution before fixed costs. Incremental park support and growth hiring are not separately modeled; the larger-route result is therefore optimistic if workload rises.

> **Base break-even:** with 180 eligible lots, the model needs $11,040 in monthly service spend, or about 37 jobs at $300, to cover $4,200 in fixed costs. At only 20% service contribution, that rises to $13,800, or 46 jobs.

Model inputs are founder planning assumptions. Fixed monthly cost: marketing $500, software $250, insurance reserve $250, bookkeeping/support $200, founder pay $3,000. Replace each reserve with actual quotes; taxes, debt service and expansion hiring are excluded.

07 / FIRST-YEAR CASH VIEW

A ramp needs a reserve.

Illustrative operating ramp: each quarter shows an average month, repeated for three months. It assumes the required payment and onboarding gates are passed before the associated revenue is collected.

AVERAGE MONTH	Q1	Q2	Q3	Q4
Eligible billed lots	30	60	120	180
Completed household jobs	8	20	35	50
Service spend at $300 / job	$2,400	$6,000	$10,500	$15,000
Park fees	$240	$480	$960	$1,440
Service contribution at 25%	$600	$1,500	$2,625	$3,750
Contribution less $4,200 fixed cost	-$3,360	-$2,220	-$615	$990
Quarter operating cash change	-$10,080	-$6,660	-$1,845	$2,970

Year-one result

Service spend: **$101,700**.
Park fees: **$9,360**.
Total contribution: **$34,785**.
Fixed costs: **$50,400**.
Operating shortfall: **$15,615**.

Peak modeled cash need

A separate $2,500 setup allowance brings the cumulative low point to **$21,085** at the end of Q3. A 15% planning cushion would make that **$24,248**. This is a scenario, not a funding commitment.

> **Test the downside:** payment activation delays, winter seasonality and slower onboarding can deepen the cash gap. Rebuild the forecast monthly using collected cash, actual crew costs, refunds and signed park agreements.

Management cash model, not formal revenue-recognition accounting. Assumes fees are collected in the modeled month, no receivable delays and no debt or taxes. Accountant review should determine the appropriate gross/net reporting and tax treatment.

08 / ACQUISITION AND MILESTONES

First prove the workflow. Then repeat it.

WHEN	ACTION	PROPOSED LEARNING TARGET
Days 1-14	Verify demo, payment wording and service capacity. Build a verified owner prospect list.	10 qualified local owner conversations and 4 booked walkthroughs.
Days 15-45	Walk through a real billing cycle; agree on a limited supported pilot.	2 pilot agreements; each has a named office contact and reconciled starting records.
Days 46-75	Observe resident access and completed work; fix recurring confusion.	At least 1 park completes a reviewed billing cycle; record support time and issue resolution.
Days 76-90	Ask for continuation and, with permission, a customer introduction.	2 parks choose a next step; documented reasons from every decline.

These are proposed targets, not existing traction. A park is **activated** only when its opening records are approved, the office can complete the chosen workflow and at least one invited household can access its own record. “Paid” and “collected” remain separate statuses.

Channels to start

Founder outreach, permission-based association introductions, office handouts and local Facebook/Instagram education. Use paid promotion only after the inquiry route and follow-up are working.

Reasons to pause

Unreconciled billing, failed account access, insufficient crew capacity, unclear pricing or payment uncertainty. Keep discovery conversations open while fixing the specific issue.

Suggested channel evidence: Big Long Lake Association membership and community channels. No partnership or endorsement is implied. See the Marketing Rollout for the weekly execution plan.

09 / MANAGEMENT AND DECISIONS

Keep the plan honest.

MEASURE WEEKLY	DEFINITION / DECISION IT SUPPORTS
Qualified inquiry → walkthrough	Owner has a relevant property, a decision role and a specific workflow need. Track why a qualified inquiry does not book.
Walkthrough → activation	Activated parks ÷ completed walkthroughs. Track setup hours and days to first useful workflow.
Resident access	Households that successfully view their own record ÷ invited households. Keep assisted access available.
Service reliability	Completed jobs with required photos ÷ completed jobs; track cancellations, rework and unresolved exceptions separately.
Contribution and cash	Collected park fees + household-service contribution - actual fixed costs. Track crew obligations and refund liabilities.
Retention and fit	Parks choosing continuation; households booking again; reasons for stopping. Do not infer satisfaction from silence.

Founder decisions before broad promotion

- Confirm the park's final fee, included support, billing start and cancellation terms in writing.
- Choose a monthly marketing cap. This kit includes $500 and $1,500 options; its financial baseline uses $500.
- Confirm the real support contact, operating hours, crew capacity and live payment capabilities.
- Set a minimum acceptable contribution and a maximum setup/support workload per park.

Internal source register: AGENTS.md; lakelife.html; lakelife-beta-launch-plan.md; src/app/for-parks/page.tsx; src/components/RenterHome.tsx; src/app/parks/rent-capability.ts; src/lib/park-platform-fee.ts; src/lib/payments-server.ts; src/lib/charge-gate.ts. Current code takes precedence over older design proposals. No customer interviews, new sales or live payment tests were performed for this plan. Keep this document internal because it includes pricing economics.
